Maven Toys Comprehensive Management Report

Sales, Marketing, Profitability, Store Performance, Product Strategy, and Variable Relationship Analysis

Reporting period: January 2022 - September 2023

Total Revenue	$14.44M
Total Profit	$4.01M
Profit Margin	27.8%
Transactions	829,262
Units Sold	1,090,565
Stores / Products	50 / 35

Prepared from the uploaded sales, product, store, inventory, calendar, Excel dashboard, and Power BI dashboard screenshots.

1. Executive Summary

Maven Toys generated **$14.44M** in revenue and **$4.01M** in profit across **50** stores and **35** products. The company achieved an overall profit margin of **27.8%**, with **829,262** transactions and **1,090,565** units sold.

> The most important management issue is margin compression: comparable Jan-Sep revenue grew by **30.9%**, while profit grew by only **16.0%**. Sales are growing faster than profit, so management should shift from revenue-only thinking to profit-focused growth.

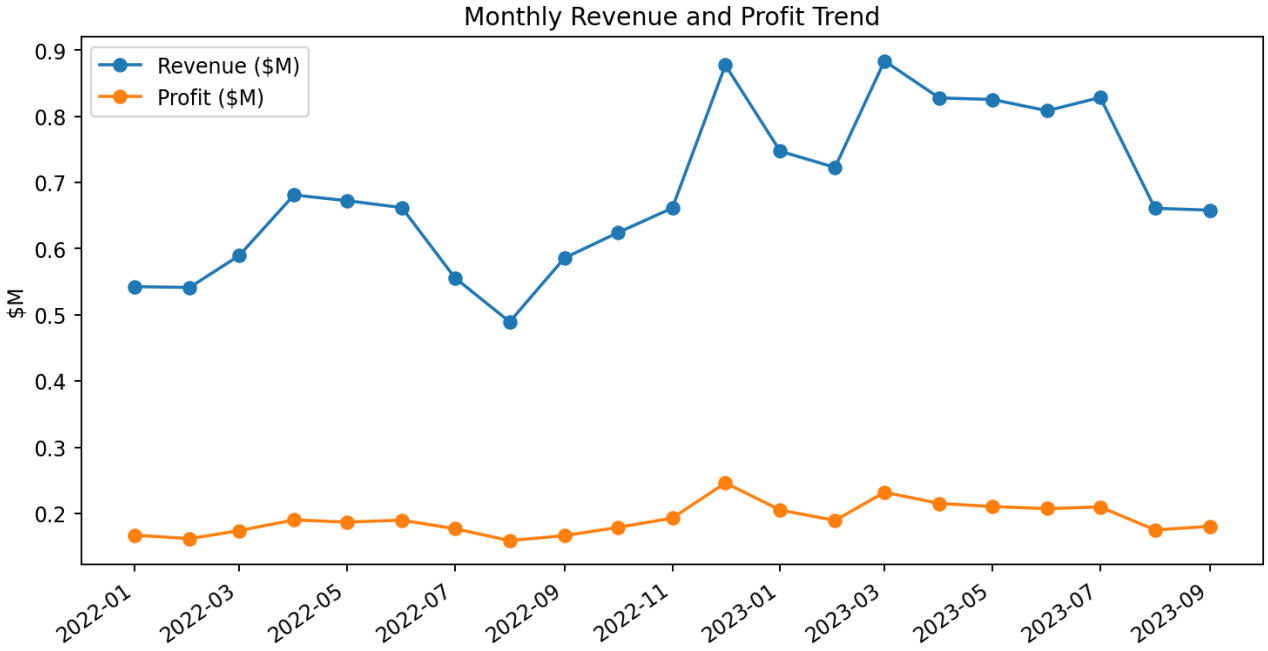

- Best profit category: Electronics, with the highest margin at roughly 44.6%.
- Best product: Colorbuds, contributing about 20.8% of total company profit.
- Best store model: Airport stores, which lead in revenue per store and profit per store.
- Biggest opportunity: increase Average Order Value (AOV) from $17.42 toward $19-$20.
- Biggest risks: margin compression, Colorbuds dependence, low-margin Lego Bricks, and weak underperforming stores.

KPI	Value
Revenue	$14.44M
Profit	$4.01M
Profit Margin	27.8%
AOV	$17
Profit per Transaction	$5
Comparable Revenue Growth	30.9%
Comparable Profit Growth	16.0%

2. Business Performance Overview

The company has healthy top-line performance and broad store coverage. The issue is not weak sales; the issue is whether the growth is sufficiently profitable.

Metric	Result	Management Meaning
Revenue	$14.44M	Strong market demand and broad transaction activity
Profit	$4.01M	Healthy but should grow closer to revenue growth
Margin	27.8%	Acceptable overall, but category/product mix needs optimization
Orders	829,262	Large transaction base; AOV improvement has high leverage
AOV	$17	Every +$1 AOV adds about $829K revenue at current transaction volume
Stores	50	Store-level performance management is essential

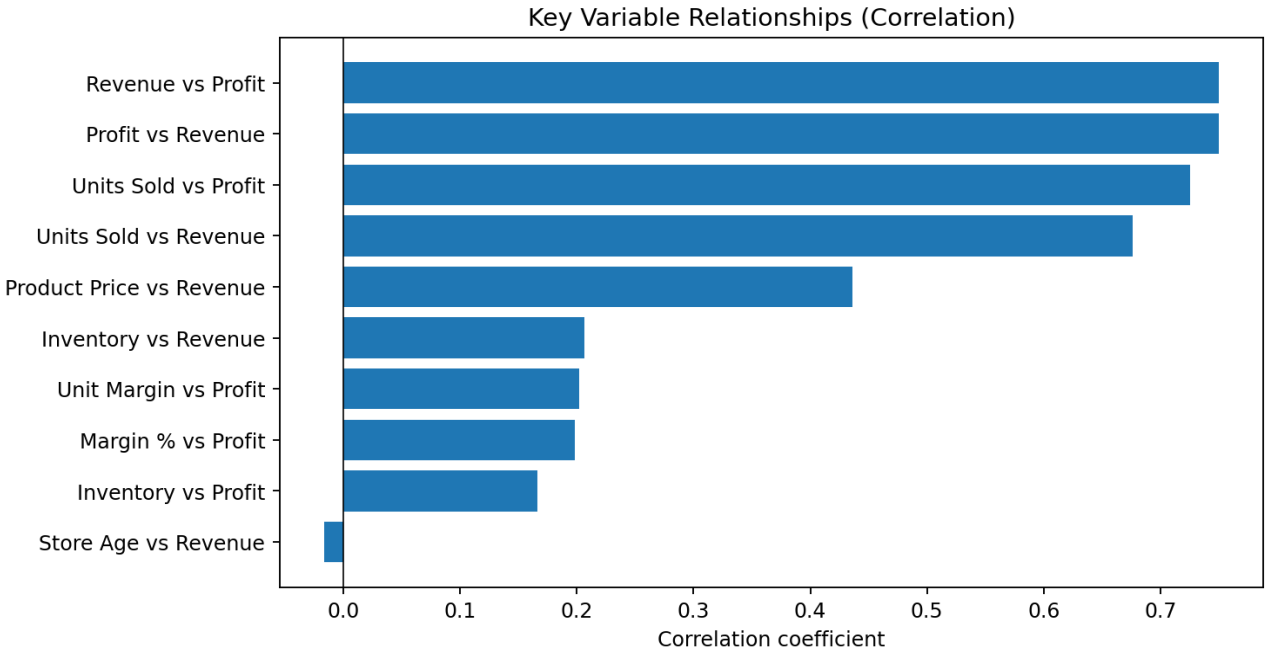

Interpretation: monthly activity shows that revenue and profit move together, but management must monitor profit growth separately because revenue growth alone can hide margin deterioration.

3. Relationships Between Variables

Correlation analysis was used to identify which variables are most strongly associated with revenue and profit. Correlation does not prove causation, but it is useful for prioritizing business questions and management focus.

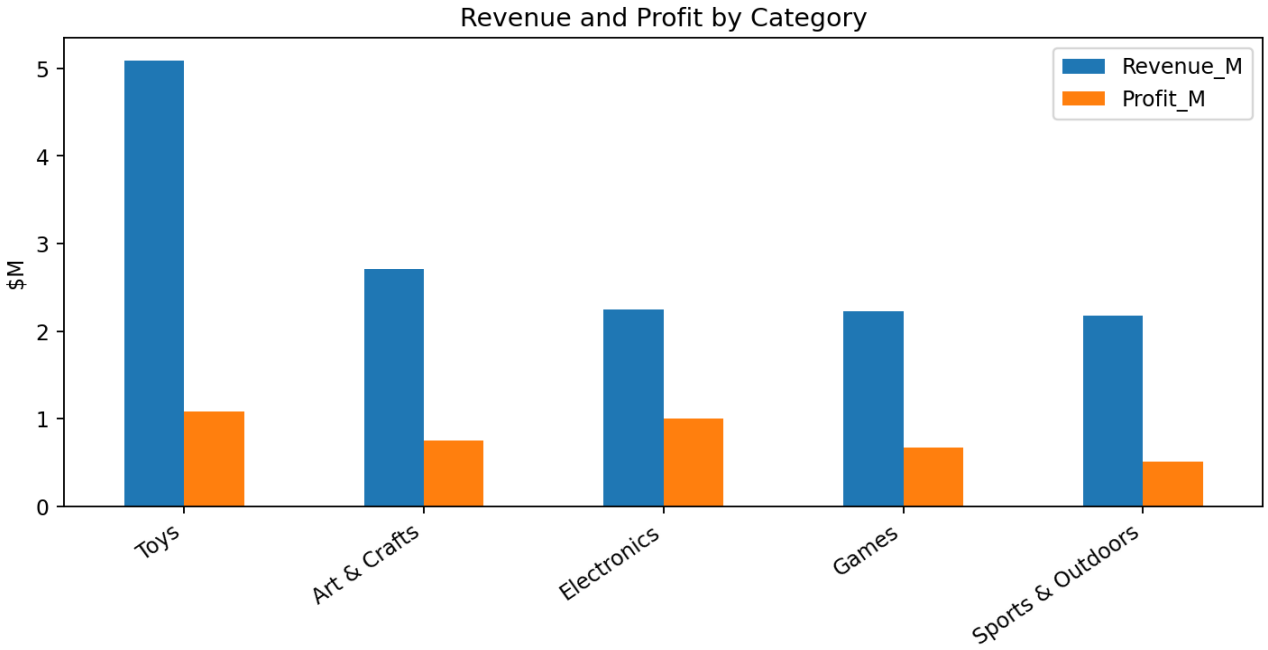

Relationship	Correlation	Interpretation
Revenue vs Profit	0.75	Strong/important relationship
Profit vs Revenue	0.75	Strong/important relationship
Units Sold vs Profit	0.72	Strong/important relationship
Units Sold vs Revenue	0.68	Strong/important relationship
Product Price vs Revenue	0.44	Moderate relationship
Inventory vs Revenue	0.21	Weak relationship
Unit Margin vs Profit	0.20	Weak relationship
Margin % vs Profit	0.20	Weak relationship
Inventory vs Profit	0.17	Weak relationship
Store Age vs Revenue	-0.02	Weak relationship

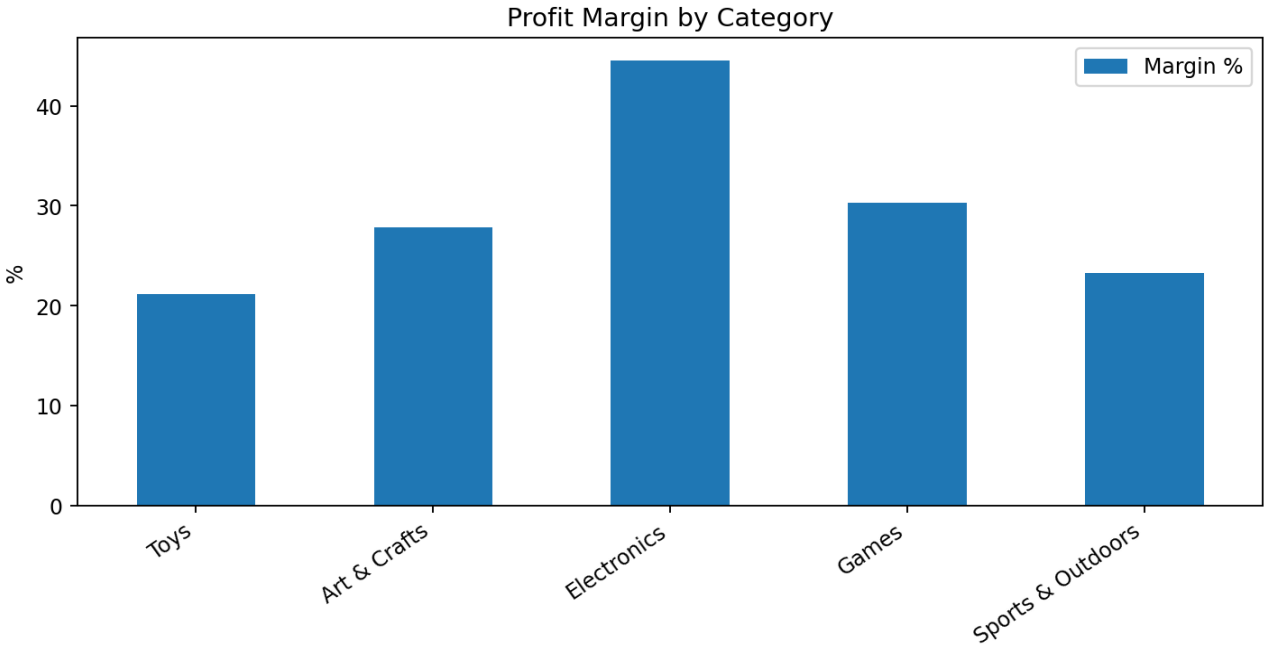

Main conclusion: price, unit sales, and unit margin are the most meaningful performance drivers. Inventory and store age have weak relationships with revenue and profit, so simply adding stock or relying on older stores is not enough.

4. Category Performance Analysis

Category	Revenue	Profit	Units	Orders	Margin	AOV
Toys	$5.09M	$1.08M	267,200	221,227	21.2%	$23
Art & Crafts	$2.71M	$753.4K	325,574	220,673	27.8%	$12
Electronics	$2.25M	$1.00M	134,075	99,025	44.6%	$23
Games	$2.23M	$674.0K	194,673	157,006	30.3%	$14
Sports & Outdoors	$2.17M	$505.7K	169,043	131,331	23.3%	$17

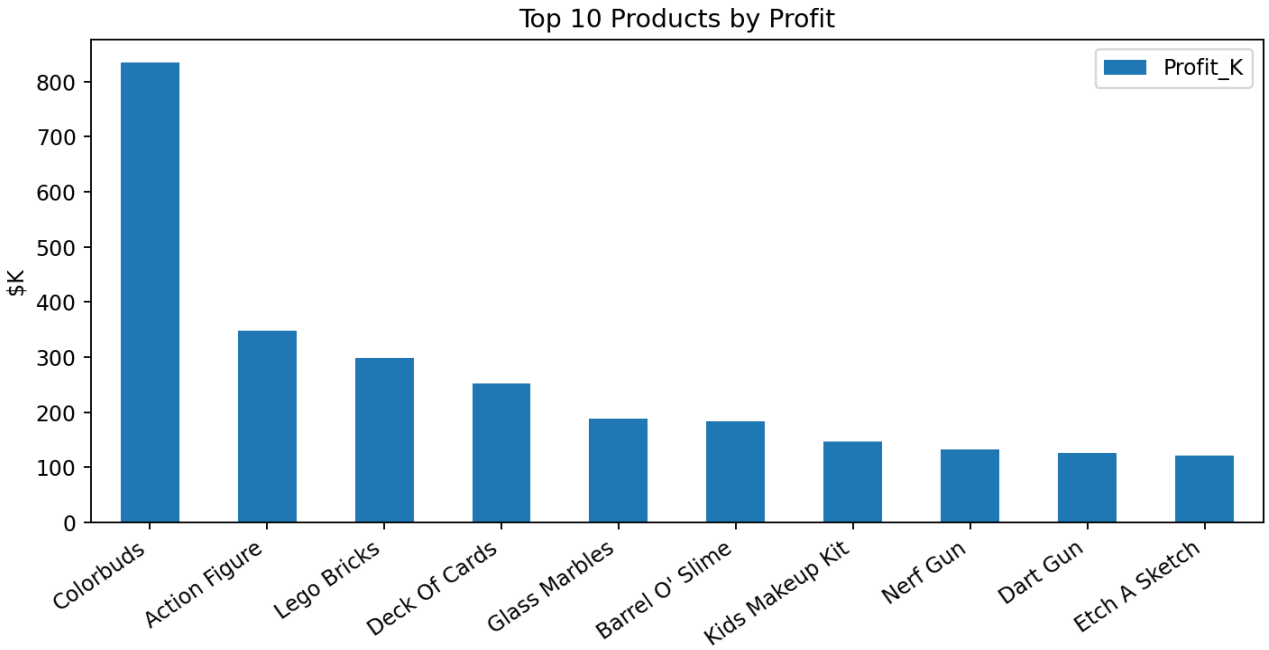

Strategic reading: Toys is the revenue engine; Electronics is the profit engine. Art & Crafts is a volume category with the highest units sold. Games has a good margin and should receive selective support. Sports & Outdoors is weaker on margin and needs review.

5. Product Performance Analysis

Products should be managed in tiers: profit drivers, traffic drivers, volume drivers, and products requiring review.

Top Products by Profit

Product	Category	Revenue	Profit	Units	Margin	AOV
Colorbuds	Electronics	$1.56M	$834.9K	104,368	53.4%	$21
Action Figure	Toys	$926.7K	$347.7K	57,958	37.5%	$19
Lego Bricks	Toys	$2.39M	$298.7K	59,737	12.5%	$50
Deck Of Cards	Games	$587.4K	$252.1K	84,034	42.9%	$9
Glass Marbles	Games	$412.3K	$187.6K	37,518	45.5%	$17
Barrel O' Slime	Art & Crafts	$365.7K	$183.3K	91,663	50.1%	$7
Kids Makeup Kit	Art & Crafts	$488.4K	$146.6K	24,433	30.0%	$23
Nerf Gun	Sports & Outdoors	$530.6K	$132.7K	26,543	25.0%	$22

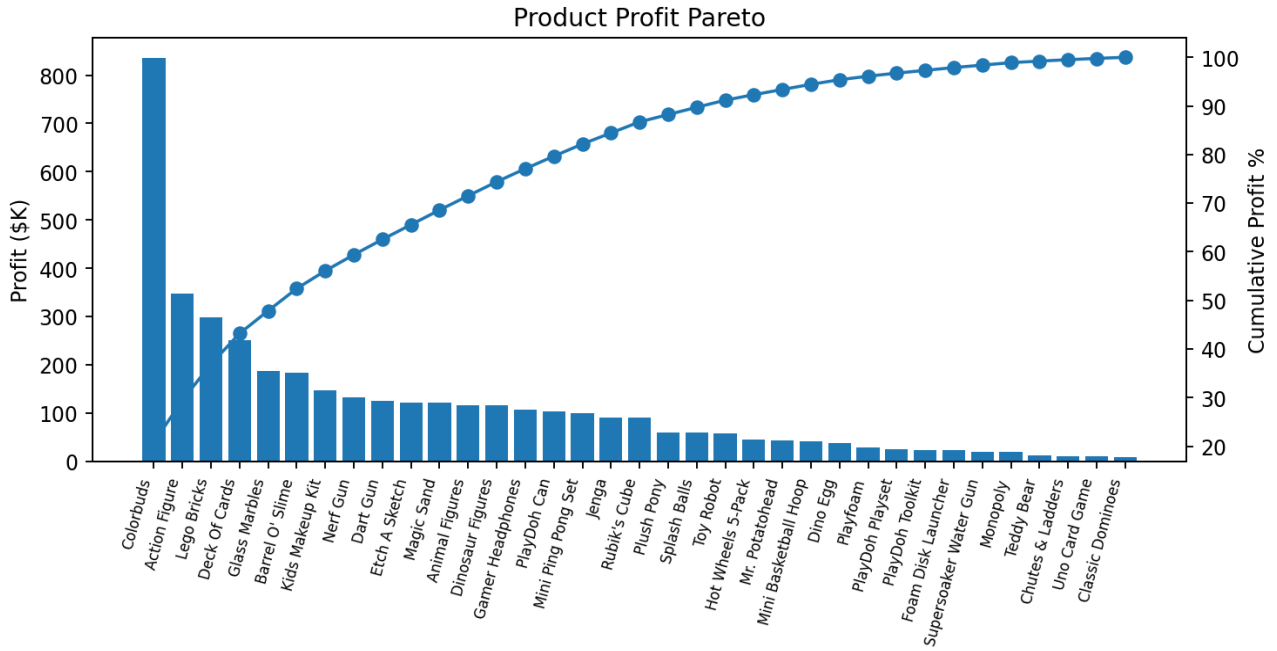

Colorbuds is the most important product in the portfolio. It combines high revenue, high profit, and a margin above 53%. It should be treated as the official hero product.

6. Product Risks and Low Performers

Product	Category	Revenue	Profit	Units	Margin	Action
Classic Dominoes	Games	$44.7K	$8.9K	4,471	20.0%	Review / bundle / reduce stock
Uno Card Game	Games	$21.7K	$10.8K	2,710	50.1%	Review / bundle / reduce stock
Chutes & Ladders	Games	$49.7K	$11.5K	3,829	23.1%	Review / bundle / reduce stock
Teddy Bear	Toys	$83.3K	$12.8K	6,416	15.4%	Review / bundle / reduce stock
Monopoly	Games	$67.7K	$20.3K	3,385	30.0%	Review / bundle / reduce stock
Supersoaker Water Gun	Sports & Outdoors	$101.8K	$20.4K	6,793	20.0%	Review / bundle / reduce stock
Foam Disk Launcher	Sports & Outdoors	$91.4K	$22.9K	7,620	25.0%	Review / bundle / reduce stock
PlayDoh Toolkit	Art & Crafts	$115.4K	$23.1K	23,128	20.0%	Review / bundle / reduce stock
PlayDoh Playset	Art & Crafts	$157.4K	$25.2K	6,298	16.0%	Review / bundle / reduce stock
Playfoam	Art & Crafts	$45.7K	$29.1K	4,158	63.7%	Review / bundle / reduce stock

Lego Bricks warning: Lego Bricks is a major revenue product but has a weak margin of about 12.5%. It should not automatically receive more marketing spend just because revenue is high. Its supplier cost, pricing, and discount policy need review.

Colorbuds concentration risk: Colorbuds contributes roughly 20.8% of total company profit. This is excellent performance but also creates dependency. The company should build at least two additional hero products to reduce single-product risk.

7. Store Performance by Location Type

Location	Stores	Revenue	Profit	Revenue/Store	Profit/Store	Margin	AOV
Downtown	29	$8.22M	$2.25M	$283.4K	$77.5K	27.4%	$17
Commercial	12	$3.28M	$926.9K	$273.3K	$77.2K	28.3%	$18
Residential	6	$1.66M	$460.4K	$276.0K	$76.7K	27.8%	$17
Airport	3	$1.29M	$378.0K	$429.9K	$126.0K	29.3%	$19

Airport stores are the best store model: highest revenue per store, highest profit per store, and strongest margin. Downtown stores remain important because they generate the largest total revenue due to store count.

8. Best and Weakest Stores

Top Stores by Profit

Rank	Store	Type	Revenue	Profit	Margin	AOV
1	Maven Toys Ciudad de Mexico 2	Airport	$554.6K	$169.9K	30.6%	$19
2	Maven Toys Guadalajara 3	Airport	$449.4K	$121.6K	27.1%	$19
3	Maven Toys Ciudad de Mexico 1	Downtown	$433.6K	$111.3K	25.7%	$18
4	Maven Toys Monterrey 2	Downtown	$373.0K	$106.8K	28.6%	$18
5	Maven Toys Toluca 1	Downtown	$411.2K	$104.6K	25.4%	$17
6	Maven Toys Guadalajara 4	Downtown	$348.5K	$102.2K	29.3%	$19
7	Maven Toys Hermosillo 3	Commercial	$344.8K	$98.8K	28.7%	$21
8	Maven Toys Mexicali 1	Commercial	$294.0K	$97.2K	33.1%	$17
9	Maven Toys Saltillo 1	Downtown	$330.4K	$94.3K	28.5%	$17
10	Maven Toys Ciudad de Mexico 3	Residential	$337.4K	$94.0K	27.9%	$17

Weakest Stores by Profit

Rank	Store	Type	Revenue	Profit	Margin	AOV
1	Maven Toys Cuernavaca 1	Downtown	$221.6K	$56.8K	25.6%	$16
2	Maven Toys La Paz 1	Downtown	$210.9K	$57.4K	27.2%	$16
3	Maven Toys Toluca 2	Commercial	$222.4K	$58.1K	26.1%	$17
4	Maven Toys Campeche 2	Commercial	$206.1K	$58.1K	28.2%	$16
5	Maven Toys Zacatecas 1	Downtown	$230.0K	$59.2K	25.7%	$17
6	Maven Toys Oaxaca 1	Downtown	$242.2K	$59.6K	24.6%	$17
7	Maven Toys Durango 1	Downtown	$222.3K	$62.7K	28.2%	$16
8	Maven Toys Culiacan 1	Downtown	$251.2K	$64.0K	25.5%	$17
9	Maven Toys Pachuca 1	Downtown	$237.7K	$64.0K	26.9%	$16
10	Maven Toys Merida 1	Downtown	$232.1K	$64.4K	27.7%	$16

Focus stores: prioritize Ciudad de Mexico 2 Airport, Guadalajara 3 Airport, Ciudad de Mexico 1 Downtown, Monterrey 2 Downtown, and Toluca 1 Downtown for campaigns and inventory. Weak stores need a 90-day recovery plan before any expansion or heavy investment.

9. Basket and Average Order Value Analysis

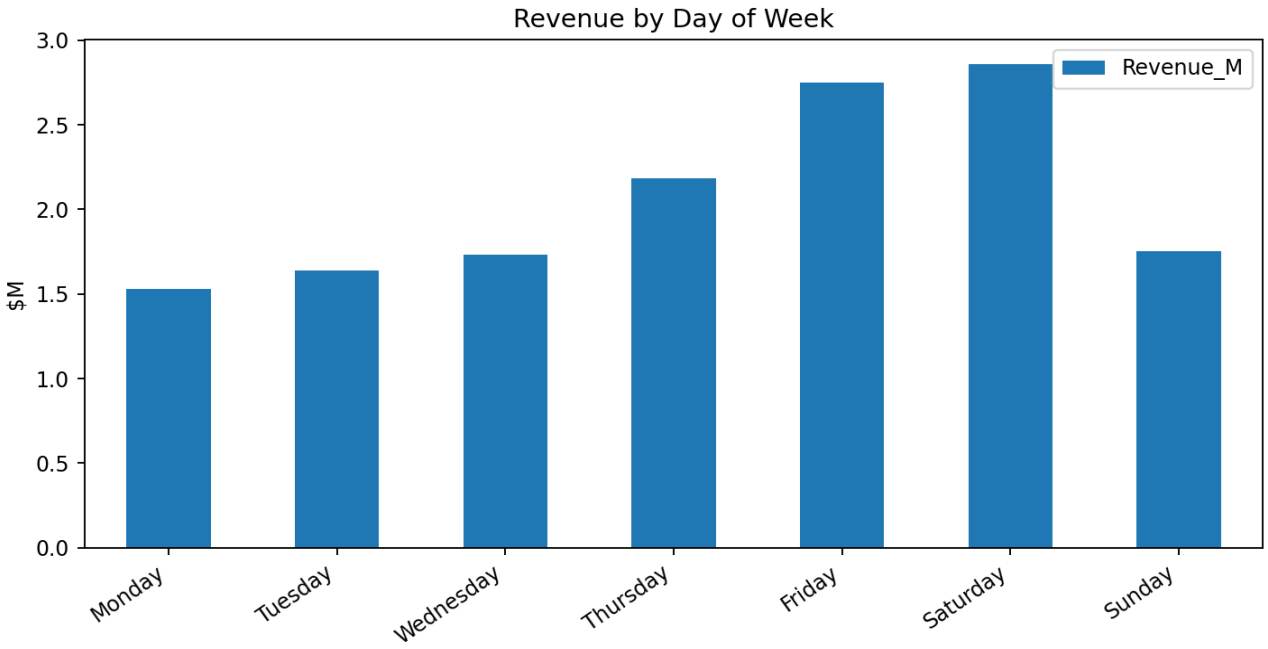

Current AOV is **$17**. This is one of the highest-leverage improvement areas. With **829,262** transactions, every additional $1 in AOV creates about **$829.3K** of additional revenue without needing more customers.

Scenario	AOV	Estimated Revenue Impact
Current	$17	Baseline
Target 1	$19	$1.31M
Target 2	$20	$2.14M

- Use bundles: Toys + Electronics, Lego Bricks + Colorbuds, Action Figure + Deck of Cards.
- Add checkout prompts for high-margin add-ons.
- Incentivize staff on profit per transaction and attachment rate, not only sales volume.
- Track AOV by store weekly and compare against Airport benchmark stores.

10. Customer Behavior and Weekly Timing

Day	Revenue	Profit	Orders	AOV	Margin
Monday	$1.53M	$439.9K	90,332	$17	28.7%
Tuesday	$1.64M	$460.9K	94,904	$17	28.1%
Wednesday	$1.73M	$486.3K	100,361	$17	28.1%
Thursday	$2.18M	$609.5K	125,053	$17	27.9%
Friday	$2.75M	$741.6K	155,088	$18	27.0%
Saturday	$2.86M	$770.7K	162,164	$18	26.9%
Sunday	$1.75M	$505.1K	101,360	$17	28.9%

Thursday through Saturday are the key trading periods. Marketing spend, stock replenishment, staffing, and promotions should be aligned to this weekly pattern.

11. Inventory Analysis and Policy

Category	Stock on Hand	Inventory Cost Value	Policy
Art & Crafts	8,635	$65.1K	Prioritize by margin and turnover
Toys	7,553	$99.9K	Prioritize by margin and turnover
Games	6,155	$51.5K	Prioritize by margin and turnover
Sports & Outdoors	4,981	$53.1K	Prioritize by margin and turnover
Electronics	2,418	$30.7K	Prioritize by margin and turnover

Inventory has weak relationship with revenue and profit. The policy should not be to increase inventory broadly; it should be to protect availability of high-margin products and reduce exposure to slow or weak products.

- No-stockout policy: Colorbuds, Deck of Cards, Glass Marbles, Action Figure.
- Reduce or cap stock: Classic Dominoes, Uno Card Game, Chutes & Ladders, Teddy Bear, Monopoly.
- Review Lego Bricks inventory carefully because revenue is high but margin is weak.
- Use weekend demand patterns to replenish before Thursday.

12. Marketing Strategy

Marketing should be reallocated by profitability, not distributed equally across products. The objective is to increase profitable revenue, not just campaign activity.

Area	Policy	Reason
Budget allocation	60% high-margin / 30% high-volume / 10% testing	Improves return on marketing spend
Hero product	Colorbuds dedicated campaigns	Highest profit and margin product
Category focus	Electronics first, Games second, Toys for traffic	Electronics is the profit engine
Timing	Launch Thursday; heavy spend Friday-Saturday	Matches sales concentration
Loyalty	Repeat purchase points and weekend offers	Improves retention and repeat purchase behavior
Clearance	Discount weak products only inside bundles	Avoids damaging premium margins

Campaign examples: Weekend Profit Campaign, Colorbuds Hero Campaign, Family Bundle Campaign, Low-Performing Product Clearance, and Electronics Attachment Campaign.

13. Sales Strategy

Sales teams should move from selling more items to selling better baskets. The goal is to increase profit per transaction and AOV.

Sales Policy	Implementation	KPI
Cross-selling	Every Toys sale triggers an Electronics add-on suggestion	Electronics attachment rate
Upselling	Offer higher-margin alternatives first	Profit per transaction
Bundles	Pair high-volume products with high-margin products	Average Order Value
Staff incentives	Reward profit and margin, not revenue alone	Margin %, AOV, Profit/transaction
Store playbook	Apply Airport store behaviors to weak stores	Store profit growth

- Required training: upselling scripts, bundle recommendation, high-margin product explanation, weekend traffic handling.
- Priority products for staff: Colorbuds, Deck of Cards, Glass Marbles, Action Figure, Electronics products.
- Sales managers should review weak stores weekly during the 90-day recovery cycle.

14. Key Mistakes and Business Risks

Risk / Mistake	Evidence	Management Response
Revenue-over-profit focus	Revenue growth 30.9% vs profit growth 16.0%	Adopt profit-focused KPIs
Electronics underutilization	Highest margin category but not top revenue category	Increase marketing and sales focus
Colorbuds dependency	About 20.8% of total profit	Develop additional hero products
Lego Bricks margin weakness	High revenue but approx. 12.5% margin	Review cost, price, discounting
AOV below potential	Current AOV $17	Launch $19-$20 AOV initiative
Weak stores	Bottom stores underperform on profit and AOV	90-day store recovery plan
Inventory inefficiency	Inventory has weak correlation with revenue	Optimize by margin and turnover

The largest mistake is managing the business as if the highest revenue product or category is automatically the best. The correct lens is profit contribution, margin, AOV, and store productivity.

15. Executive Decisions and 30-60-90 Day Plan

Timeline	Actions	Expected Outcome
First 30 Days	Launch Colorbuds campaign; increase Electronics visibility; build magnetic tiles display; identify weak products and stores	Quick wins and identify issues
Day 31-60	Implement bundles; train sales staff; test Airport playbook in selected Downtown stores; expand investment campaigns	AOV and store productivity improvement
Day 61-90	Measure lift; adjust inventory; reduce weak product exposure; revise marketing budget; finalize new KPI system	Prepare for scale
6-12 Months	Develop 2-3 new hero products; expand Electronics share; institutionalize profit-based incentives	Sustainable profitable growth

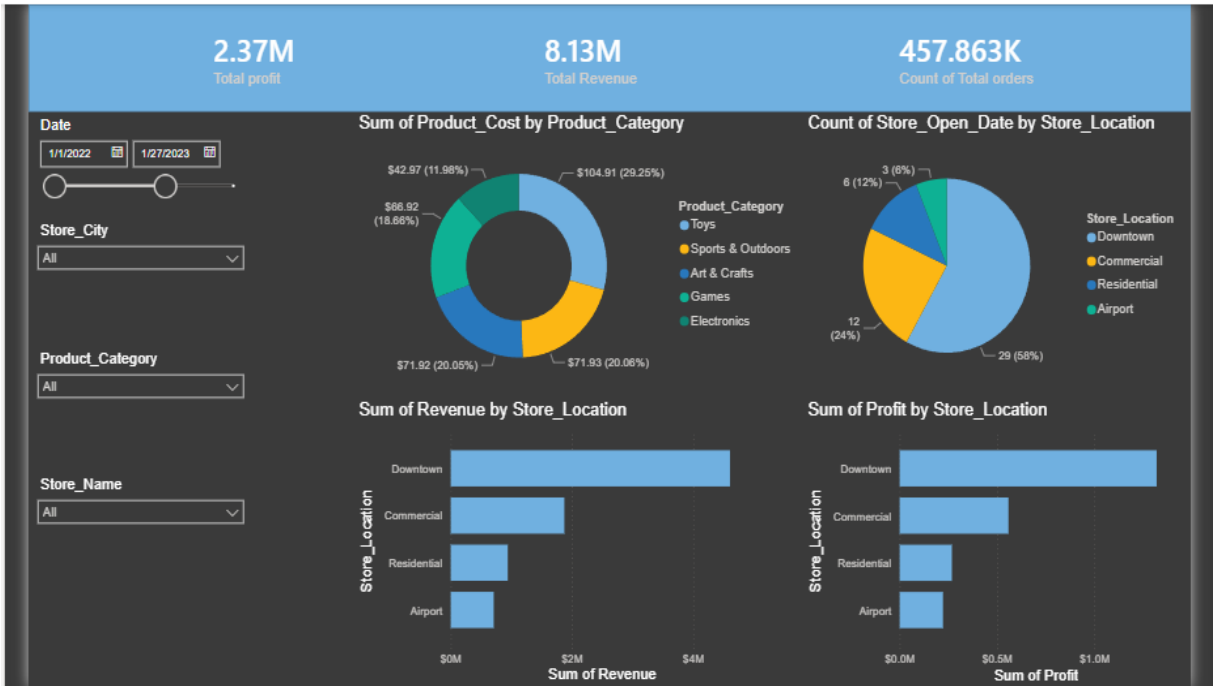

Executive decisions required:

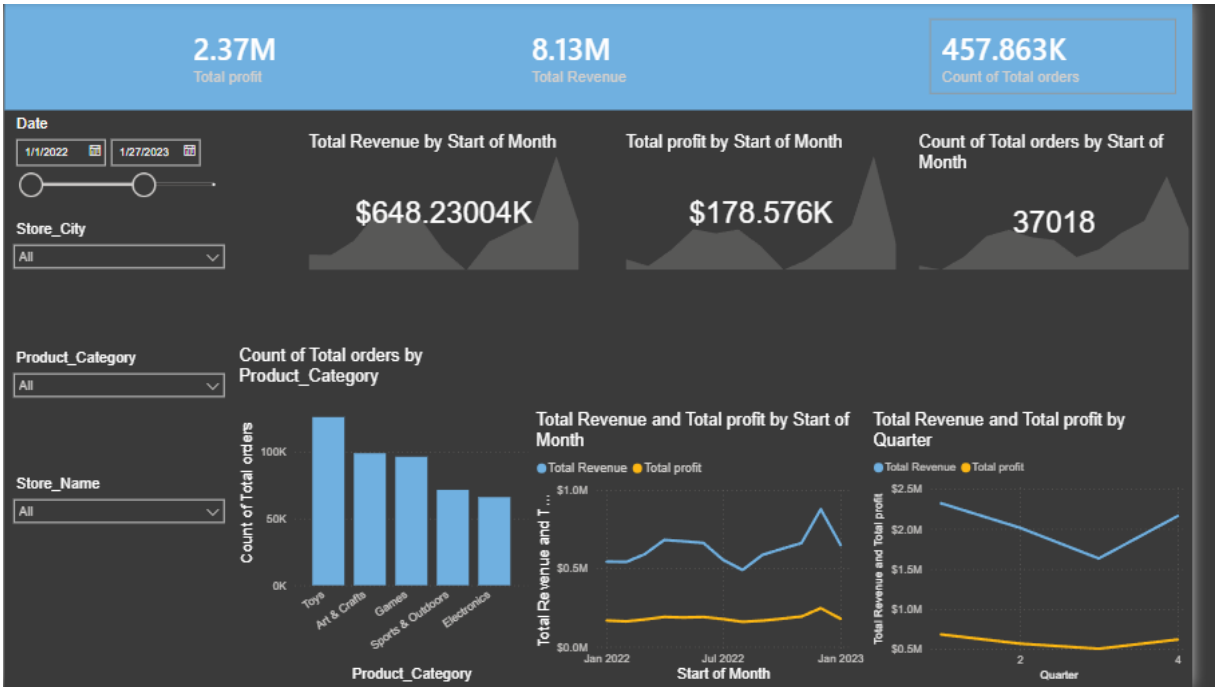

- Increase investment in Electronics.
- Declare Colorbuds as the official Hero Product.
- Launch AOV improvement initiative targeting $19+.
- Replicate Airport store practices in Downtown stores.
- Review Lego Bricks profitability.
- Shift company KPIs from revenue-first to profit-first.
- Create a 90-day recovery plan for weak stores and products.

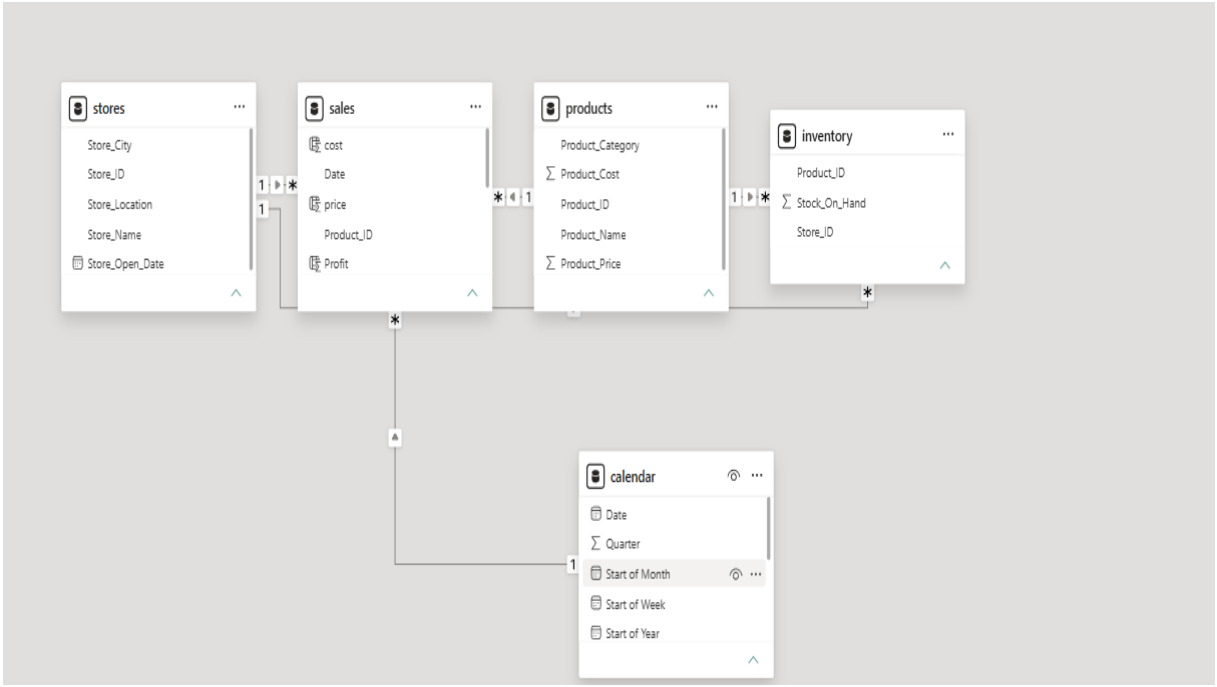

16. Dashboard Review and Recommended Additions

The uploaded dashboard already has a solid model and executive visuals. The next improvement is to make the dashboard more decision-oriented.

- Add KPI cards: Profit Margin %, Revenue Growth %, Profit Growth %, AOV, Profit per Transaction.
- Add Top 10 and Bottom 10 Stores pages.
- Replace low-value pie charts with profit per store, margin by store, and AOV by store.
- Add Pareto chart for product profit concentration.
- Add forecast page for revenue, profit, and margin.
- Add executive summary page with five decisions required.

17. Final Executive Conclusion

Maven Toys is not a weak business. It is a growing business with a profitability optimization problem. The priority is not to chase revenue blindly; the priority is to grow profit intelligently.

Best Category	Electronics
Best Product	Colorbuds
Best Store Model	Airport
Best Store to Prioritize	Maven Toys Ciudad de Mexico 2 - Airport
Most Important Issue	Margin compression
Best Growth Lever	AOV improvement and Electronics expansion
Best Management Policy	Profit-focused KPIs and inventory allocation by margin

Final recommendation: sell less randomly, sell more profitably. Use Toys and Art & Crafts to attract customers, use Electronics and Colorbuds to generate profit, use Airport stores as the operating benchmark, and use AOV as a core growth lever.
